KEY BENEFITS

Highly effective heat protection in summer

Healthy living: free from pollutants

Active global climate protection by absorbing CO₂

Moisture regulating

CLIMATE HERO: ABSORBS CO₂

100% SUSTAINABLE

THE MIRACLE PLANT

Industrial hemp is a true wonder plant! As it grows, industrial hemp absorbs CO₂ from the atmosphere thus helping to reduce this harmful greenhouse gas. Even more CO₂ is saved during hemp processing and production as the manufacturing process consumes little energy.

THERMO HANF® hemp insulation materials can also be recycled. A closed production cycle minimises waste as well as protecting the environment.

FACTS

- >> THERMO HANF® provides **high-performance insulation**
- >> The hemp plant **absorbs CO₂ as it grows**
- >> Hemp cultivation **requires no pesticides and little water**
- >> **CO₂ is saved during production**
- >> **THERMO HANF® insulation materials can be recycled** when no longer needed

WHAT'S IN IT?

THE DOG LOVES IT

Animals love to nap on our hemp mats because they are completely natural, store heat and are free from pollutants. Why's that? The hemp plant has no known pests, so there is **no need to use synthetic pesticides**, making the product pollutant-free from the very start. Harvesting and processing into fibres takes place without the use of chemical agents.

The only things we add to our hemp fibres are **soda as a fire retardant**, an ingredient that is also used in organic foods, and **polymer supporting fibres made of recycled PET** to increase the stability of the mats.

FACTS

- » **Fine industrial hemp fibres, grown in Germany**
- » **High-quality jute fibres from standardised food packaging**
- » **Soda salt for fire protection**
(permitted in organic foods)
- » **Polymer support fibres made of recycled PET**

DEPENDABLE SUPPLY

HEMP FROM OUR OWN FIELDS

Supply bottlenecks are becoming more and more common. Nearly every sector suffers regularly from severe supply problems because they source their raw materials from third-party producers at home and abroad.

With our insulation materials you're on the safe side. **We source our raw material from the fields operated by our parent company HempFlax®**, which are located in Germany, the Netherlands and Romania.

FACTS

- » **Secure raw material sourcing from our own HempFlax® fields in Germany**
- » **Short delivery routes**
- » **Long term supply contracts available**

SUMMER COMFORT

NATURALLY COOL

THERMO HANF® COMBI JUTE keeps your home pleasantly cool even on the hottest summer days because its outstanding properties mean the same qualities that keep your heat retained within the house during the colder months keeps unwanted warmth outside in summer.

TIP

- >> THERMO HANF® COMBI JUTE **keeps attic rooms pleasantly cool** even in hot temperatures

WINTER WARMTH

WARM AND COSY

Cosy, warm rooms with THERMO HANF® COMBI JUTE. The low thermal conductivity makes our insulation the perfect solution for all areas of your house.

TIP

- >> **Recommended insulation thickness in the roof:** min. 200mm, depending on requirements or subsidies thicker layers can also be installed.

PEACE AT LAST

NOISE INSULATION

You can close your eyes, but you can't close your ears. Good, effective noise insulation gives you greater quality of life.

Just 80 mm of THERMO HANF® COMBI JUTE reduces sound impact by approx. 44 dB.

For comparison: 44 dB is the difference between a soft whisper and a Hoover, or a normal conversation and a circular saw.

SAFE AND SOUND

MOULD RESISTANT

THERMO HANF® COMBI JUTE is exceptionally resistant against mould growth.

Rating level 0 = top mark

No increased risk from hemp fibres

EASY TO WORK WITH

- >> **Low-dust processing**
- >> **No itchiness**
- >> **No protective clothing needed**

SUITABLE TOOLS

STABLE INSULATION MATERIALS REQUIRE SHARP BLADES

- ✓ **THERMO HANF® Insulation Saw**
Order this saw from your insulation dealer and get a free blade sharpener. Say goodbye to dull blades!

- ✓ **Bosch GFZ 16-35 AC**
with TF 350 serrated blades

- ✓ **Festool Cordless Insulating-Material Saw ISC 240**

A TOP PERFORMER

FLEXIBLE

The mats are **flexible** and adapt to the construction. Add an extra 10mm to the width for a snug fit.

ELASTIC

The insulation mats are **exceptionally pliable**.

TOUGH AND DURABLE

The mats are **extremely tear-resistant and stable**; they should only be cut with the recommended tools.

ABOUT US

HEMPFLAX[®]
Building Solutions GmbH

Nature wins!

PIONEERS OF GREEN CHANGE

THERMO HANF[®] insulation has been manufactured in Germany since the 1990s. The factory in Nördlingen, Bavaria, produces insulation mats, stuffing wool and needle felt made from industrial hemp fibres.

Hemp can significantly mitigate problems of environmental pollution and CO₂ emissions – which is something we're passionate about. That is why in 2020 we joined the **Dutch HempFlax**[®] **Group**, Europe's largest independent producer of industrial hemp.

This partnership enables us to source the hemp directly from the producer. **Short distances, a shared cultivation philosophy and fair pricing are the advantages that you benefit from as our customer.**
